

- Codepen Link: <https://codepen.io>
- First React Code:

```
function Person(props) {  
  console.log(props);  
  return (  
    <div className="person">  
      <h1>{props.name}</h1>  
      <p>Age: {props.age}</p>  
    </div>  
  );  
}  
  
let persons = (  
  <div>  
    <Person name="Karim" age="27" />  
    <Person name="Rahim" age="28" />  
    <Person name="Rahat" age="25" />  
  </div>  
  
);  
  
ReactDOM.render(persons, document.querySelector('#app'));
```
